

January 4, 2023

Good morning! It's Sophia from 731 and I'm here this Words of Wisdom Wednesday on behalf of the S.E.A.L Team.

Did you know today is Perihelion Day? You probably are thinking what is that? On January 4, 2023, the Earth approaches the Sun at its closest point roughly two weeks after the December solstice. Perihelion is the name given to this location on Earth's orbit around the Sun. Whereas every year, early July marks the Aphelion which is when the Earth is positioned farthest from the Sun around two weeks after the June solstice. It's interesting to note that while we are farther away during the sweltering summer, we are closer to our flaming star throughout the winter.

Why, you might be asking, am I teaching you science at this hour of the day? Because today's main theme is distance. Have you lost touch with friends and family? If so, now is the perfect time to "Perihelion" yourself to your distant friends and family. Become as close as you once were and inform your friends and family about what is going on in your life.

Thanks for listening have a Where are Your Relationships Wednesday 😊

SEAL Team pledge:

We are the Dyker S.E.A.L. Team

Positivity is our dream

We teach it every day
To help others live the optimistic way
We learn to control our emotions and feelings
So, we always have effective social dealings
No stone left unturned; no person left behind
Every member of our team has the power to be kind
We spread kindness to our friends, families, and those who need a smile
When facing hardships and adversity, the S.E.A.L. Team goes the extra mile
